

Symposium on Evolving Communications and Socio-economic Change (STEP 1996)

DAVID ANTHONY, THOMAS MANDEVILLE & JOHN FOSTER
(Program Coordinators)

The four papers in this symposium were drawn from a one day seminar titled "Evolving Communications and Socio-Economic Change: Is it possible to develop an interdisciplinary, evolutionary methodology?" during the annual (STEP) Doctoral Program in Science, Technology and Socio-Economic Progress. STEP 1996 was hosted by the Department of Economics, University of Queensland and The Communication Centre, Queensland University of Technology.

STEP is an Australia-wide, interdisciplinary program, bringing together Ph.D. students working in the Science, Technology and Socio-Economic Progress field. The theme for 1996 was "Evolving Communications and Socio-Economic Change". The work of candidates was reviewed by their peers and invited academic mentors. A number of papers relevant to the general theme were presented by Australian and international speakers.

A complete report will be available in the Conference Series published by the Economics Department, University of Queensland.

STEP 1997 will be hosted by the University of Technology, Sydney late in 1997. Further information can be obtained from the coordinators: Dr Harry Bruce (h.bruce@uts.edu.au) and Christina Spurgeon (clspurge@acs.itd.uts.edu.au).
